Priority number(s): DE19991017102 19990415

Abstract of DE19917102

The planning and diagnosis device uses a computer installation coupled to the electrical installation via an interface and used for performing a planning routine, for planning the individual electrical devices and/or stations of the installation, a configuration routine for configuring the electrical installation, a setting up routine, for setting up the individual devices and/or stations and a diagnosis routine, for diagnosis and monitoring of the latter. An Independent claim for a computer for a planning and diagnosis device is also included.
